

## Use Case of Cyber Security EPP & EDR for Comprehensive Endpoint Protection

TV Raghuram, the MD of Insurance Corporation of India (ICI) was anxious. Analysts were predicting big hits on BFSI by hacktivists. He called in Information Security team, led by Reema Deshpande (AGM IT), to understand ICI's security posture.

"Reema," said Raghuram, "the nation depends on us not only to insure their lives, but also protect their information. We cannot let them down even in the face of such advanced threats. I know we are protected at enterprise level, how about end points?"

"The right combination of Endpoint Protection (EPP) and Endpoint Detection & Response (EDR) solutions will protect our endpoints," responded Reema, "and I must update you sir, our EPP is being upgraded and EDR is being implemented by CMS IT Services."

"Help me understand Reema."

"Together, EPP & EDR provide comprehensive protection against malware, ransomware, and other threats by using behavioral analysis, machine learning, and artificial intelligence."

"How long before full implementation?"

"We are in the final stages sir, say a week at max."

***This is a real life use case. Names have been protected.***
