

## Use Case of Cyber Security EPP & EDR for Asset Inventory

Pratima Agrawal, the CISO at Concord Bank (CB), was actively seeking reliable solution to establish a comprehensive record of the bank's digital and physical IT assets. This encompassed enterprise devices like servers, storage, network devices, databases as well as end-user devices.

She invited CMS IT team for a solution discussion. The team explained to her how EPP and EDR Solutions can be useful to create such an inventory apart from their other complimentary utilities. The solution can collect data about the devices that are on CB's network. This data can be used to identify devices that are not authorized or that are vulnerable to attack, and appropriate action can be taken on them.

CMS IT's solution left Pratima thoroughly satisfied. Recognizing the strategic importance of inventory management within the overarching gamut of EPP & EDR solutions, she decided to go ahead with CMS IT's advise. This not only helped CB create an efficient asset inventory, but also beef up the bank's cyber security posture.
