

Use Case of Cyber Security

EPP & EDR for Data Loss Prevention

Jyotsana, the cybersecurity analyst at Infratech Pvt. Ltd., fortified the company's cybersecurity defenses by implementing a robust Endpoint Protection Platform (EPP) and Endpoint Detection and Response (EDR) solution. One day, her colleague Renu alerted her team about unusual activities flagged by the system.

As the security team delved into the incident, the EPP & EDR solution unraveled a sophisticated cyber-espionage attempt. The malware had infiltrated the network covertly, masking its actions to evade discovery. The team was able to track the attacker's activities and obtain insight into the harmful operations they carried out thanks to EDR's real-time monitoring capabilities.

The EPP & EDR solution also revealed attack details - time, location, and the type of malware. This insight fortified defenses, identifying vulnerabilities. EDR exposed tactics, enabling a targeted response. The cyber security team swiftly identified the source and took protective actions winning accolades from the CEO, Mr. Kaushal. This incident drove continuous improvements, turning EPP & EDR into a proactive shield.
